Bachelorette Party Budget

List the costs, note who can only pay up to a set amount, and work out an equal share for everyone else.

1. Costs

Cost	Amount
Accommodation	
Group dinner	
Activity	
Decorations and supplies	
Drinks	
Transport	
Favors or gift bags	
Gift for the bride	
Other:	
Total cost (A)	

2. Work out the equal share

Total cost (A) _____

Limits added up (B) _____

People paying an equal share (C) _____

Equal share = (A − B) ÷ C _____

B is what the people with a limit pay: the most they can afford, or 0 for a bride who pays nothing. Example: a 2,800 weekend for 8, the bride pays nothing and Sam at most 220: (2,800 − 220) ÷ 6 = 430 each.

3. Who pays what

Name	Limit (if any)	Pays	Paid ✓

Agree the budget before anyone books. A limit only helps if it is below the equal share.
